Exam : **1z0-1068**

Title : Oracle Commerce Cloud 2019
Implementation Essentials

Vendor : Oracle

Version : DEMO

NO.1 The Commerce Cloud storefront extension framework provides a set of resources, templates and libraries that support the implementation of custom client-side store extensions.

What are two aspects of this framework? (Choose two.)

- A. JavaScript code which provides client-side page logic
- B. Code management repository tools
- C. Integrated development environment for Commerce Cloud
- D. Commerce Cloud delivered libraries with resources that support client-side development

Answer: A,D

NO.2 What are two examples of existing functionality provided with Commerce Cloud custom bindings? (Choose two.)

- A. display product images
- B. connect to source control repositories
- C. save local data to disk
- D. format date and numbers
- E. publish messages to other websites

Answer: A,B

NO.3 A company has many anonymous shoppers who pay for orders with split payments. In their prior system, they ran into issues when one of the payment methods failed and the order was in a pending state waiting for the rest of the payment. In those cases, the shoppers could not retrieve the orders when they returned to the site because they did not have access to the order number? The company plans to configure Commerce Cloud to avoid this situation where the anonymous shopper does not know the order ID.

What step can the company take in Commerce Cloud to avoid this happening?

- A. Select the Payment Settings option to notify anonymous shoppers of partial payment
- B. Enable the Order Placed Email to send the order ID when the payment goes through.
- C. Enable the Order Payment Initiated Email to send the order ID when the order is created
- D. No default configurations exist to help with this problem. This can only be handled in the custom payment integration system.

Answer: B

NO.4 Consider the following code snippet from the config.json file for a custom payment gateway extension's properties:

```

"properties": [
  {
    "id": "paymentMethodTypes",
    "type": "multiSelectOptionType",
    "name": "paymentMethodTypes",
    "required": false,
    "helpTextResourceId": "paymentMethodsHelpText",
    "labelResourceId": "paymentMethodsLabel",
    "defaultValue": "generic",
    "displayAsCheckboxes": true,
    "options": [
      {
        "id": "generic",
        "value": "generic",
        "labelResourceId": "genericLabel"
      }
    ]
  }
]

```

Which two statements describe the `paymentMethodTypes` property configuration? (Choose two.)

- A. The generic option will appear as a checkbox in the Administration UI
- B. The property is public by default and can be used in a custom widget
- C. Other `paymentMethodTypes` options defined in the `gateway.json` file will appear in the Administration UI, even though not explicitly defined in `config.json`
- D. The default value is set to generic, which means that option will be selected in the Administration UI

Answer: B,C

NO.5 After a year running their sites on Commerce Cloud, an international company has changed the URL patterns for both the product and collection pages across multiple languages. The product page URL pattern has been updated to use a queryable URL slug. The collection page URL pattern has been updated by translating the string 'category' into each language, but retained the same structure with no queryable URL slug.

Which set of actions should the company take on the URL Patterns tab to complete the process?

- A. Deselect Auto Redirect and click the Build URL Slugs button for the collection page
- B. Select Auto Redirect for collections, deselect it for products, and click the Build URL Slugs buttons
- C. Deselect Auto Redirect and click the Build URL Slugs button for the product page
- D. Select Auto Redirect and click the Build URL Slugs button for the product page

Answer: B

NO.6 What are two use cases for employing widget configuration settings? (Choose two.)

- A. to provide an increased level of merchandiser control over widget behavior and display

- B. to determine whether a widget can be placed on a layout
- C. to expose parameters that may vary between widget instances
- D. to provide links to 3rdparty JavaScript libraries

Answer: A,B

NO.7 A developer is customizing the payment methods widget to enable the shopper to store a credit card when checking out. The widget needs to add three properties to the payments object of the JSON authorization request when creating the order:

- * saveCard(Boolean)
- * nickname(String)
- * setAsDefault(Boolean)

Each of the properties needs to be bound to a particular view model for the properties to be added to the payments object.

Which is the correct view model?

- A. paymentViewModel
- B. orderViewModel
- C. cartViewModel
- D. widgetPaymentViewModel

Answer: D
