**Title :** Avaya Aura Messaging  
Implementation and Maintenance  
Exam

**Vendors :** Avaya

**Version :** DEMO

NO.1 The WebLM server controls the use and access of Avaya Aura Messaging features through licenses

which must be purchased including the number of Avaya Aura Messaging enabled mailboxes the

customer wants to us.

Which two statements are accurate regarding licensing the Avaya Aura Messaging system?

(Choose

two.)

A. A license can be created by Avaya Backbone support; in the event that the permanent license has not

yet been issued; this temporary license will expire in 30 days.

B. The license is created based on the Host ID of the Storage Server.

C. Avaya technicians and Business Partners connect to the Avaya support site and Product Licensing and

Delivery System (PLDS) to order and retrieve the license file during installation of the server.

D. An enterprise license allows the same license to be shared with multiple Messaging systems within an

organization.

E. User mailbox count can only be changed through PLDS either by purchasing additional seats or

moving seats between licenses.

Answer: B,D

NO.2 What is Avaya's recommended order when upgrading servers in a multi-server deployment?

A. Always upgrade the Storage server first and then the application servers.

B. Always upgrade the application servers in the deployment first and then the other

C. Servers can be upgraded in any sequence.

D. All servers can be upgraded simultaneously.

Answer: A

NO.3 A user was unable to login yesterday but can login today. The user does not remember the exact details

but may have received a timeout or an invalid password.

If the user is unable to login again, which two actions should you perform to troubleshoot this situation?

(Choose two.)

A. Open the System Management Interface and navigate to Messaging Administration >

## Messaging

System (Storage) > User Management and review the User properties.

B. Open the System Management Interface and navigate to Messaging Administration >

## Messaging

System (Storage) > User Activity Log Configuration and ensure that Activity Log Enabled is set to yes.

C. Open the System Management Interface and navigate to Diagnostics > Diagnostics (Application) and

make a test call to that specific User.

D. On the Administration menu, click Messaging > Logs > User Activity, and review the Subscriber Activity

log for a specified timeframe.

Answer: B,D

NO.4 A user has a completely functional Avaya Aura Messaging mailbox and the Message Waiting Indicator

(MWI) light is working. The user informs you that text notifications are not being received on the cell

phone. You log on to the system and see that text notification has been set up correctly on the user

preferences page.

What can you do to test the connectivity to the user's cell phone service provider?

A. Use the SMS Connection diagnostic from the Messaging SMI.

B. Use the SMTP Connection diagnostic from the Messaging SMI.

C. Use the POP3 Connection diagnostic from the Messaging SMI.

D. Use the Mail Delivery diagnostic from Messaging SMI.

Answer: D

NO.5 An end user has a completely functional mailbox but complains that when using Notify Me to phone is

configured with a long distance number, calls are not received. The user is one of the groups of users with

this problem. Other users can use long distance numbers for their Notify Me to Phone number

successfully. Your testing reveals that the problem is exactly as described using the same long distance

number; one user successfully uses Notify Me to Phone and a non working user cannot.

What is causing the problem?

- A. The non working users class of service does not allow long distance dialing from the system.
- B. The non working users mailbox configuration is set to disallow long distance dialing from system.
- C. Dialing rules have been configured incorrectly for the system.
- D. The non working users do not have extensions that are configured in the switch.

Answer: A

NO.6 Which type of data do you need to enter in the Connection field of the SIP specific configuration.?

- A. The fully Qualified Domain Name (FQDN) of the far end switch.
- B. The hostname followed by the port of the far-end switch.
- C. the IP address and port of the far end switch.
- D. the FQDN and port of far end switch.

Answer: C

NO.7 Where do you define topology properties for an Avaya Aura Messaging system?

- A. on the storage server, which then applies them to the associated Application servers
- B. on the Application server, which then applies them to the associated Storage server
- C. on both the Application server and the associated Storage server
- D. on each Application Server of a cluster and on the associated Storage server

Answer: A

NO.8 An end user has a completely functional mailbox but complains that when using Notify Me to Phone is

configured with a long distance number, calls are not received. The user is one of a group of users will this

problem. Other users can use long distance numbers for their Notify Me to Phone numbers successfully.

Your testing reveals that the problem is exactly as described using the same long distant number; one

user successfully uses Notify Me to Phone and a non working user cannot.

What is causing the problem?

- A. The non working users class of service does not allow long distance dialing from the system.
- B. The non working users mailbox configuration is set to disallow long distance dialing from the system.
- C. Dialing rules have been configured incorrectly for the system.

D. The non working users do not have extensions that are configured in the switch.

Answer: A

NO.9 On which two virtual servers do we install the WebLM license file received from the Avaya licensing and

Delivery System (PLDS)? (Choose two.)

A. on the Console Domain Network Configuration (cdom) of the Storage Server

B. on the System Domain (Domain 0) on all of the application only servers

C. on cdom of the Single Server

D. on the System Domain (Domain-0) on any one of the application servers

E. on Avaya Aura Messaging on the first application server in the Domain

Answer: A,C

NO.10 A manager claims that mailbox 5608 is dormant and has not being used for more than 30 days. Where

would you verify this information?

A. the application server

B. the Users and Uninitialized Mailboxes reports

C. the Uninitialized Mailboxes report

D. the User Activity log

Answer: D
