Exam : **CTIL**

Title : Certified Software Tester -
Intermediate Level (CSTIL)

Vendor : GAQM

Version : DEMO

NO.1 At the end of Sprint 1, which of the following would give the best indication of test coverage?

- A. Number of user-stories required to define the trading environment.
- B. Amount of unit testing planned by developers for each user-story associated with the trading environment.
- C. Number of links required to the stock exchange.
- D. Percentage of user-stories tested and passed for the trading environment.

Answer: D

NO.2 Which one of the following test tools would you recommend for the E2E phase.

- A. A configuration management tool to ensure that all user-stories have been properly archived.
- B. A test design tool to create the test cases as efficiently as possible.
- C. A performance test tool to check that anticipated loading can be handled.
- D. A modelling tool to verify the stock exchange pricing structures.

Answer: C

NO.3 At what point in the test process should you first consider the test environment required for the project?

- A. When writing the test policy.
- B. When writing the test strategy.
- C. With designing the test cases.
- D. When writing the test procedures.

Answer: B

NO.4 Which of the following is the main purpose of an incident tracking process?

- A. To identify the average number of steps required to recreate each incident.
- B. To calculate the average turnaround times per defect.
- C. To identify the priority of each incident.
- D. To understand the status of each incident at any given time.

Answer: D

NO.5 Which of the following reviews would you recommend to address this issue?

- A. A walkthrough of the requirement specification, to check for errors.
- B. A management review of defects logged and cleared to see if defects are being addressed correctly.
- C. A technical review of the industry standard routing protocols to see if they have inaccuracies in them.
- D. An inspection of the code for this part of the functionality to try to localise the defective parts of the code.

Answer: D

NO.6 Which one is a product risk associated with the air quality management system?

- A. The system required to monitor oxygen levels may be more expensive than those required to monitor air temperatures.
- B. SubInc may need to recruit extra developers and testers to deliver the project on time.

- C. Oxygen levels may reach dangerously low levels.
- D. Extreme temperatures may lead to heat exhaustion of personnel.

Answer: C

NO.7 Which of the following best describes the difference between the use of walkthroughs and inspections in this scenario?

- A. Walkthroughs of specifications would enable the individuals to learn more about the system being developed, whilst inspections would allow the organization as a whole to improve.
- B. Walkthroughs of signalling rules will be more cost effective than inspections.
- C. Inspections of code should be carried out by the developers, whilst code walkthroughs should include just the testers.
- D. A walkthrough is an example of a static testing technique, whilst an inspection is an example of a dynamic testing technique.

Answer: A
